<p style="text-align:center">Design Sprint Day 1: Scenarios, User Stories, and Feature Lists</p>

Scenario:

21-year old college senior Andrew is a student at UNC Charlotte gradually getting closer to his graduation date. Harboring ambitions to reach for and expectations to meet for himself and others, Andrew had a lot on his mind. With only a few classes left to pass, Andrew would be on track to graduate on time once he fulfills his Data Science major requirements. Yet, Andrew still had uncertainties within himself. In a decade of pandemic pandemonium that seemed perpetual, the go-getter attitude Andrew once possessed from his earlier college years grew weary. Andrew would often sleep in for a majority of the day when he did not have classes, occasionally go days having eaten either only one meal or nothing at all, and stay up long into the morning having accomplished little to nothing to the chagrin of his family. Regardless, Andrew knew he had to prepare himself for life after graduation, lest all the years of college be for naught. So Andrew decided to seek out advice from the University Career Center, where he would be introduced to the Niner Sync program, a service dedicated to optimizing student productivity related to fulfilling graduation requirements, seeking internships or jobs, and most importantly, preparing for life after college.

User Story:

"Working towards my final year of college was a lot harder than I had hoped it would be. And with so little time in between, it was so hard for me to choose which options were best for optimizing my standing in the long-term. But for now, this Niner Sync Program could help me be in sync with my own self again before and after graduation." - Andrew

Feature List:

- Matches degree fulfillments with compatible/relevant internships/jobs

- Keeps track of potential employers looking for a certain major that you may be in

- Recommends which classes and how many classes to take based on premeditated
  algorithms of prerequisites and major requirements

- Possesses workspaces for building resumes, cover letters, LinkedIn profiles, etc.

- Compatible on both PC and smartphone that sync up the same information for the user
  with one another
